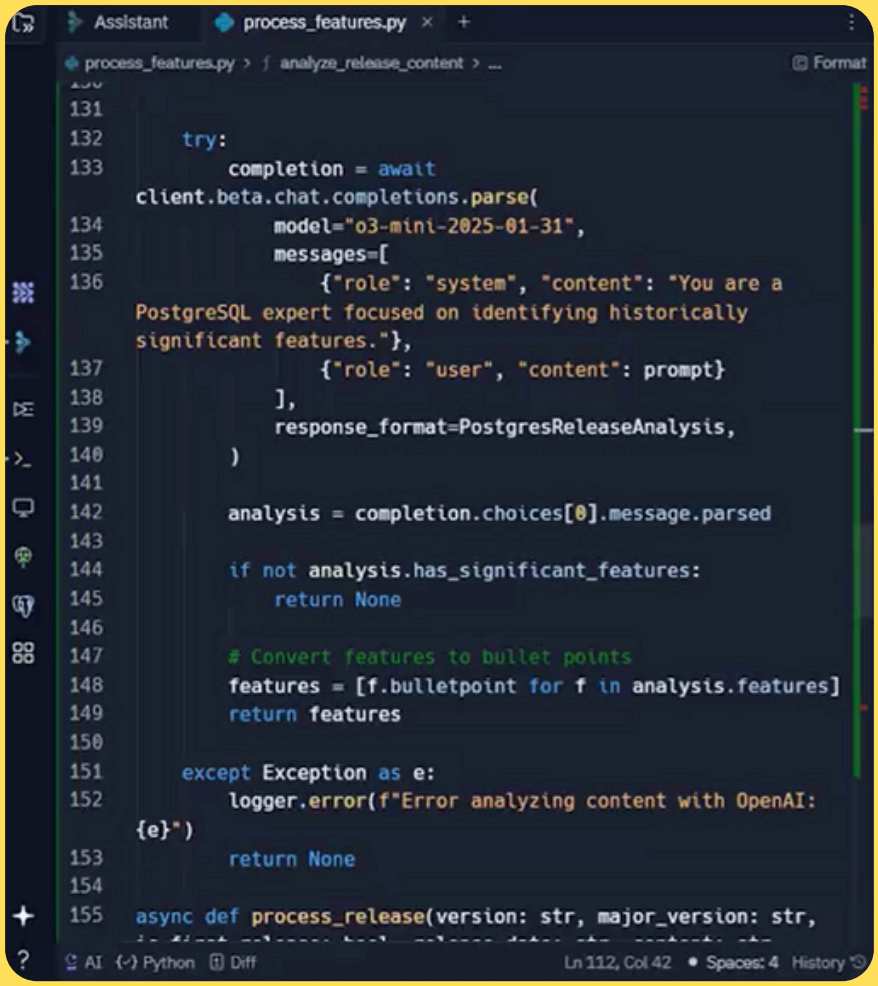
The Future Is No-Code

24 Projects That Showcase the Power of Modern Tools

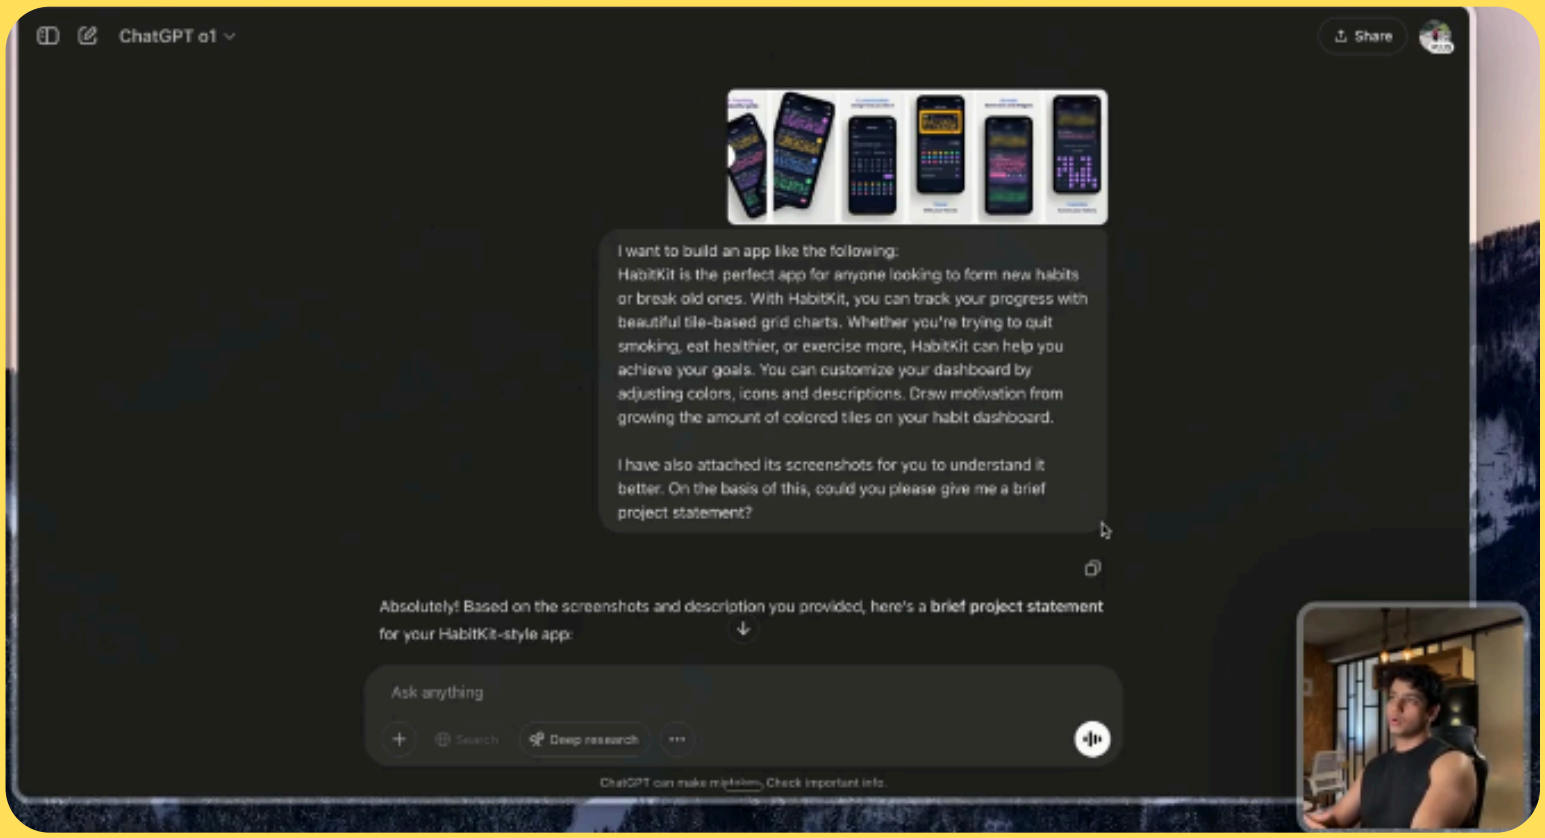
Neon built an ETL script in Replit to extract key features from each release using the OpenAI API



We built an ETL script in Replit that uses the OpenAI API to automatically extract key features from each new release.

- It pulls in changelogs, parses the content with GPT, and outputs structured summaries of what's new, improved, or fixed — all in one shot.
- Built for speed, insight, and automation. Perfect for keeping product teams, users, and stakeholders in sync with every iteration.

Prajwal Tomar built an entire mobile app from scratch with Bolt + UX Pilot + ChatGPT



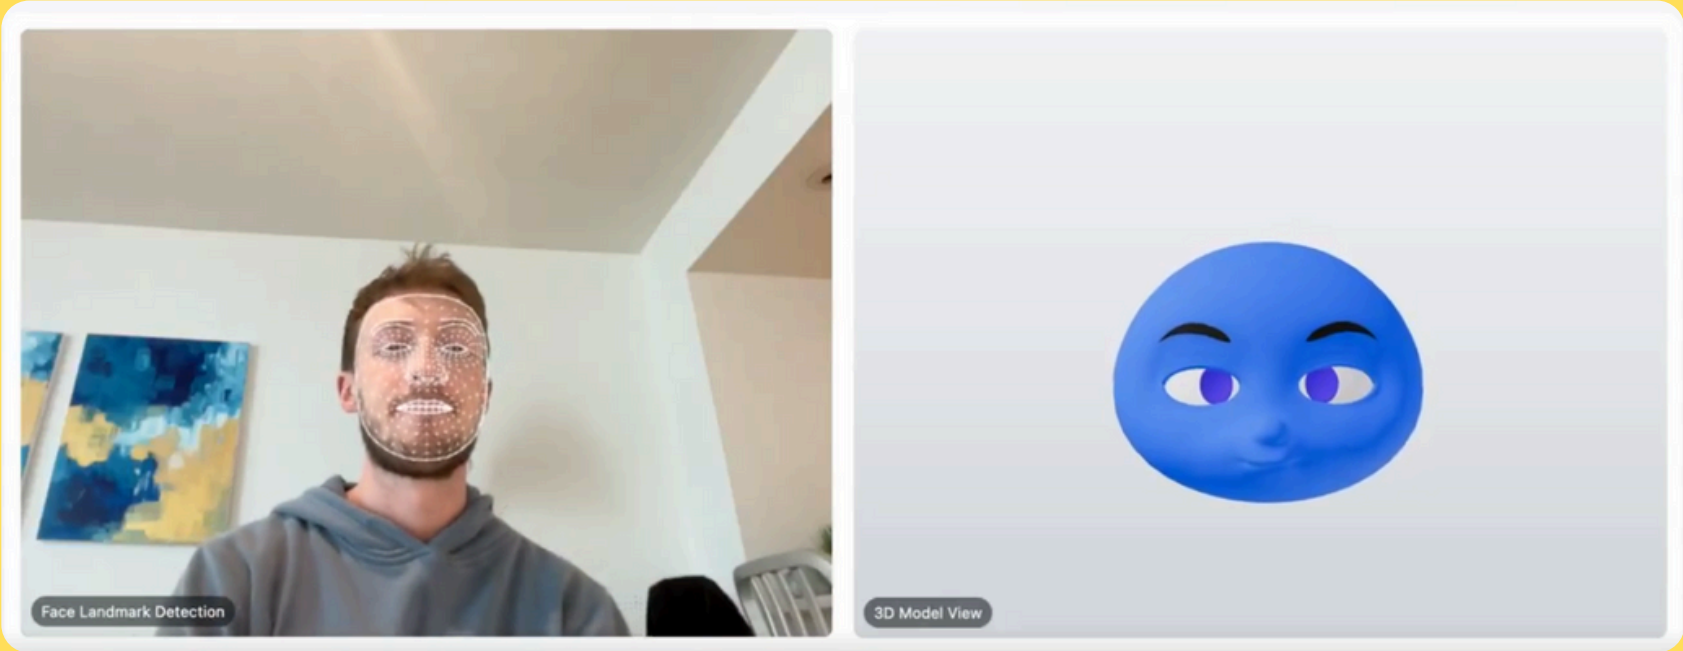
Bolt for backend + logic

- UX Pilot for intuitive design flows
- ChatGPT for fast iteration and problem-solving

No boilerplate. No drag. Just streamlined execution with the help of smart tools and sharper instincts.

This is what the future of app development looks like: fast, AI-augmented, and creator-driven.

Face tracking + 3D model morph targets by Ian Curtis



Real-time expression, redefined.

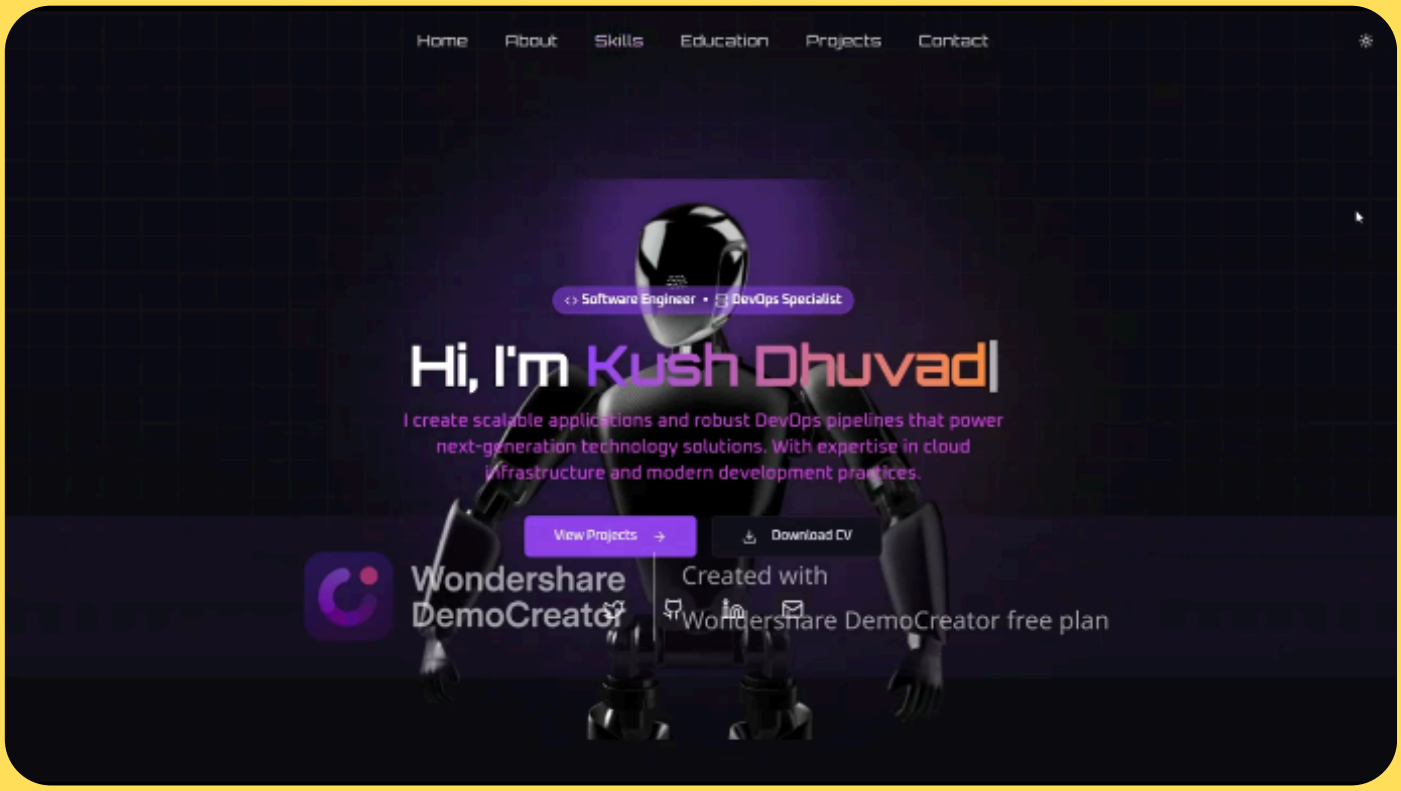
Ian Curtis is blending face tracking with 3D model morph targets to create incredibly lifelike, responsive digital avatars — all happening in real time.

- Facial movements are captured
- Mapped directly to 3D morph targets
- Resulting in fluid, expressive character animations
-

This kind of innovation opens up huge potential across gaming, AR/VR, virtual production, and live digital presence.

Brilliant work that shows what's possible when precision meets creativity.

Kush Dhuvad vibe-coded his personal portfolio website using Lovable



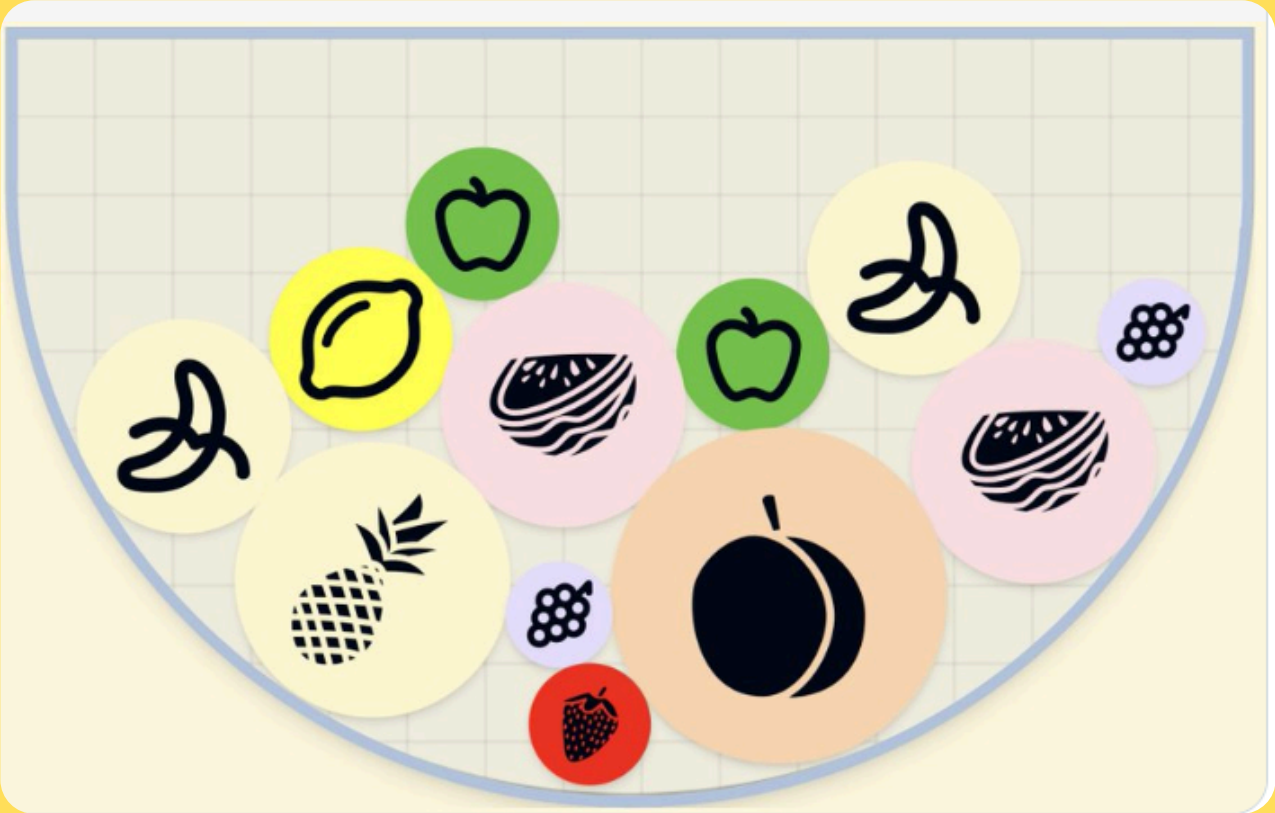
Kush Dhuvad just launched his personal website, and it's anything but ordinary. Built entirely with Lovable, the site is vibe-coded to reflect his personality, style, and creative energy.

- Powered by Lovable
- Designed with intention
- Built to resonate, not just inform

In a world full of generic portfolios, this one feels different — and that's exactly the point.

Amazing work, Kush — a reminder that personal sites should speak for you, not just about you.

Øyvind Grotmol’s 9-year-old son Axel built a game using Lovable



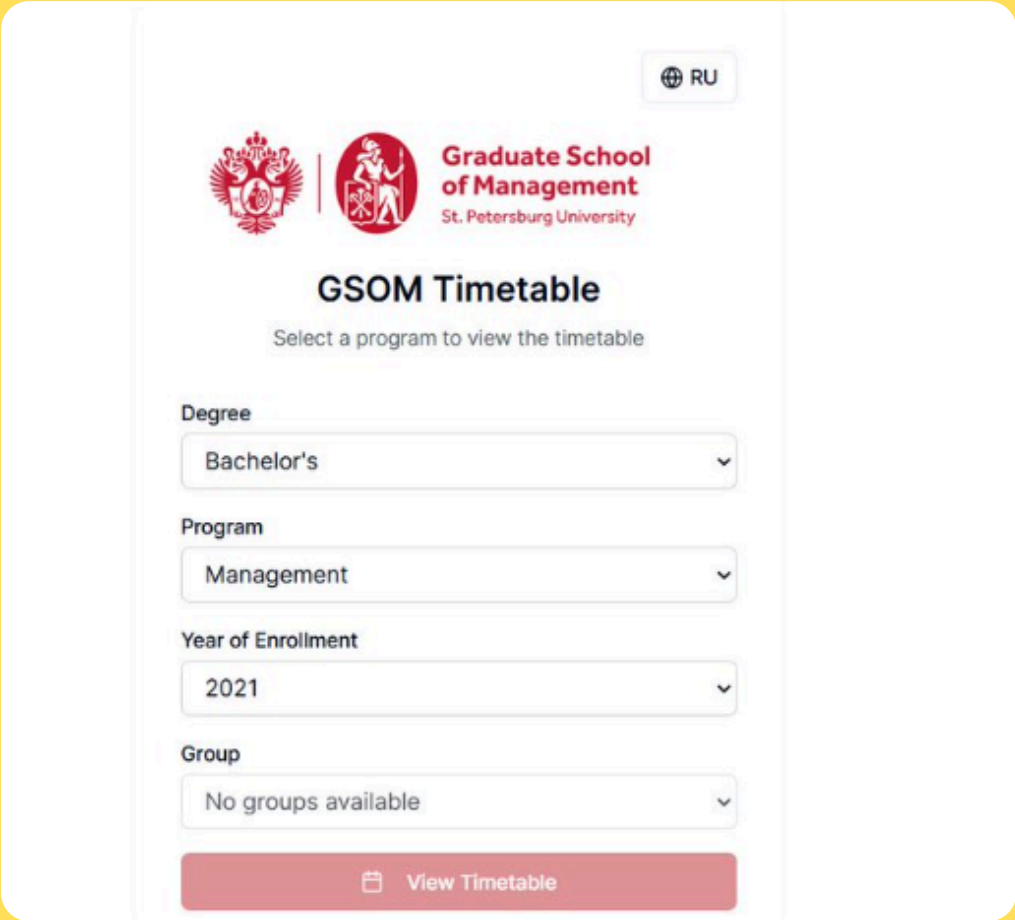
At just 9 years old, Axel isn’t just playing games — he’s creating them.

- Built in Lovable
- Designed entirely by him
- Powered by curiosity and creativity

This is what happens when intuitive tools meet young minds: imagination turns into real, working products.

Massive kudos to Axel — and to platforms like Lovable that are making technology approachable, empowering, and fun for all ages.

Enyo Sam built a study timetable for a whole University using v0

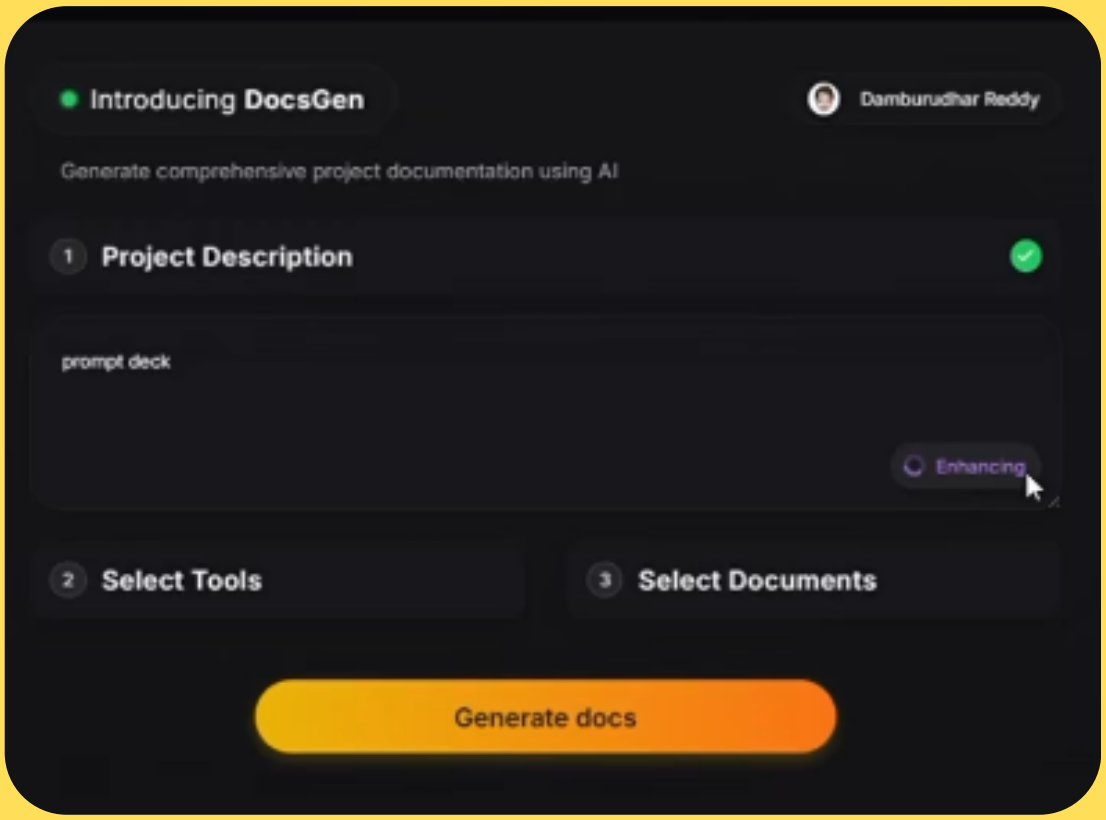


Revolutionizing University Timetables.
Enyo Sam has just built a study timetable for an entire university using v0 — and it's a game-changer.

- A system designed to make scheduling easier for every student
- Powered by automation, ensuring no clashes and smooth flow
- Optimized for the needs of a full academic community
-

By using v0, Enyo has streamlined what used to be a complex and manual process, creating a seamless experience for students, faculty, and administrators alike. Incredible example of how no-code tools can drive impactful solutions for educational institutions.

Damburudha built an app on v0 that generates project documentation using AI



AI-powered project documentation made easy.

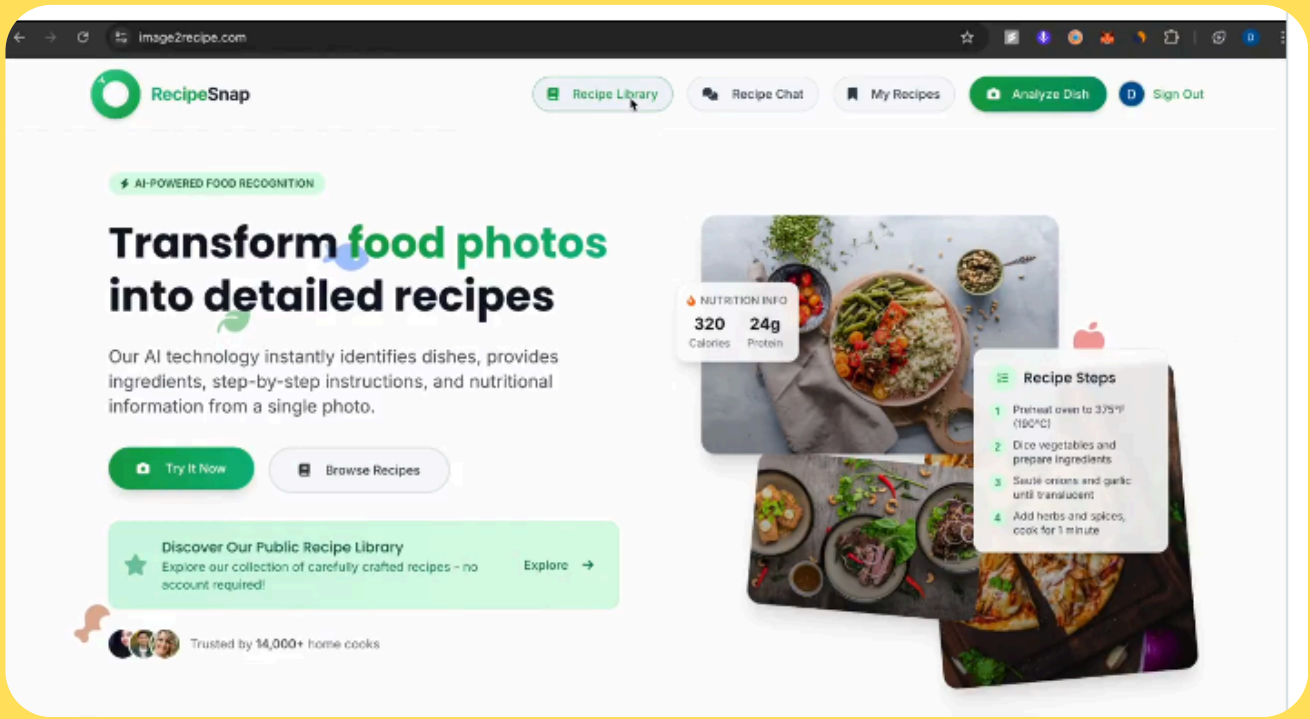
Damburudha has just built an app on v0 that generates project documentation using AI — and it's a game-changer for teams everywhere.

- Automatically create comprehensive, tailored documentation
- Built with v0 for seamless integration and efficiency
- Streamline the development process and boost productivity
-

This innovative solution removes the hassle of manually writing docs, allowing teams to focus on what really matters: building.

Kudos to Damburudha for leveraging AI and no-code tools to simplify and automate an essential part of the project lifecycle

Dhruvil built a web app that was created without writing a single line of code



Dhruvil just built an entire web app without writing a single line of code — and it's a testament to the power of no-code platforms.

- Fully functional web app
- Built entirely with intuitive tools and workflows
- Fast, efficient, and ready to scale

This is a prime example of how no-code tools are empowering creators, innovators, and entrepreneurs to bring their ideas to life faster than ever before.

Kudos to Dhruvil for proving that you don't need to be a developer to build impactful, functional web applications.

Rahul Chidgopkar built an MVP of his multi-lingual AI receptionist

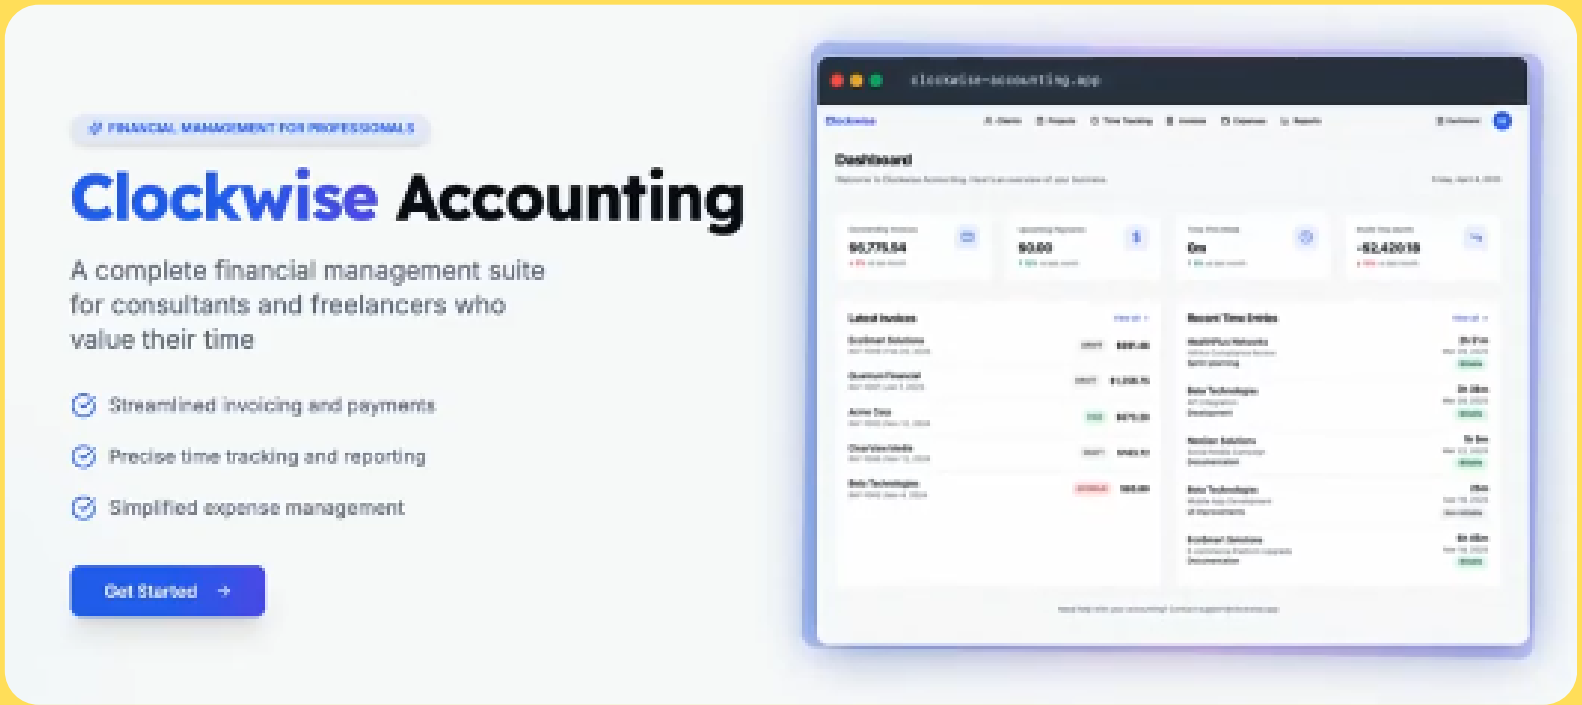
Building the future of customer interaction.
Rahul Chidgopkar has just built an MVP of his multi-lingual AI receptionist, and it's a game-changer for businesses everywhere.

- Supports multiple languages for global accessibility
- Streamlines customer interaction with AI-driven precision
- Perfect for enhancing customer service and reducing response times

This MVP shows how AI can transform front-line support, making it accessible, efficient, and scalable for businesses of all sizes.

Huge kudos to Rahul for creating an innovative solution that pushes the boundaries of customer experience and accessibility.

Jeff P. dropped a demo of Clockwise Accounting software made using Lovable + Supabase



Accounting, reimagined.

Jeff P. just dropped a demo of Clockwise Accounting — a sleek, modern accounting software built using Lovable and Supabase.

- Built with Lovable for intuitive UX
- Powered by Supabase for real-time data and scalability
- Designed to make accounting faster, simpler, and way more human

This is a great example of how powerful, production-ready tools can help solo builders and small teams ship high-quality software — fast.

Big shoutout to Jeff for showing what's possible when design, data, and execution align.

Luis Accorsi vibe coded in 5 days using v0's free plan and built this based on an image from Figma

Luis Accorsi just vibe-coded a full product using v0's free plan, turning a single Figma image into a live, working build.

- 5 days from design to deployment
- Started with just one visual from Figma
- entirely with v0 — no code, no limits
-

This is the kind of speed and creativity that's possible when great design meets powerful, accessible tools.

Huge kudos to Luis for proving that with the right vision (and the right tools), shipping doesn't have to be slow.

Ahmed Qayyum built a session tracking dashboard for Highlevel using Replit

Real-time insights, simplified.

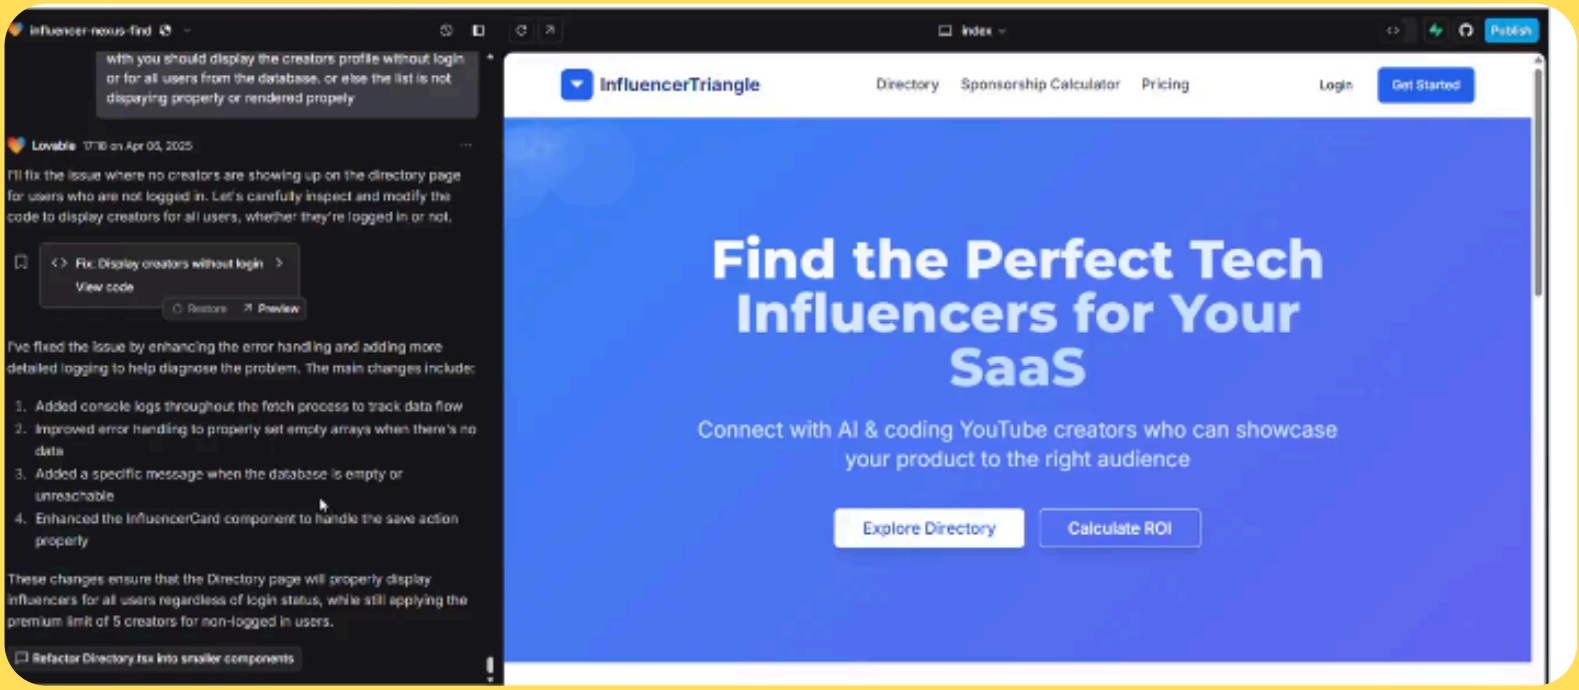
Ahmed Qayyum just built a session tracking dashboard for HighLevel — fully developed in Replit.

- Tracks user sessions with clarity and precision
- Built for HighLevel to enhance visibility and performance
- Developed end-to-end in Replit for rapid iteration and deployment

This dashboard helps teams stay informed, optimize user experience, and make smarter decisions — all in one clean interface.

Big kudos to Ahmed for turning data into action with a lightweight, high-impact build.

Bakkesh KS built his first SaaS MVP in 1 day using Lovable with just 30 credits



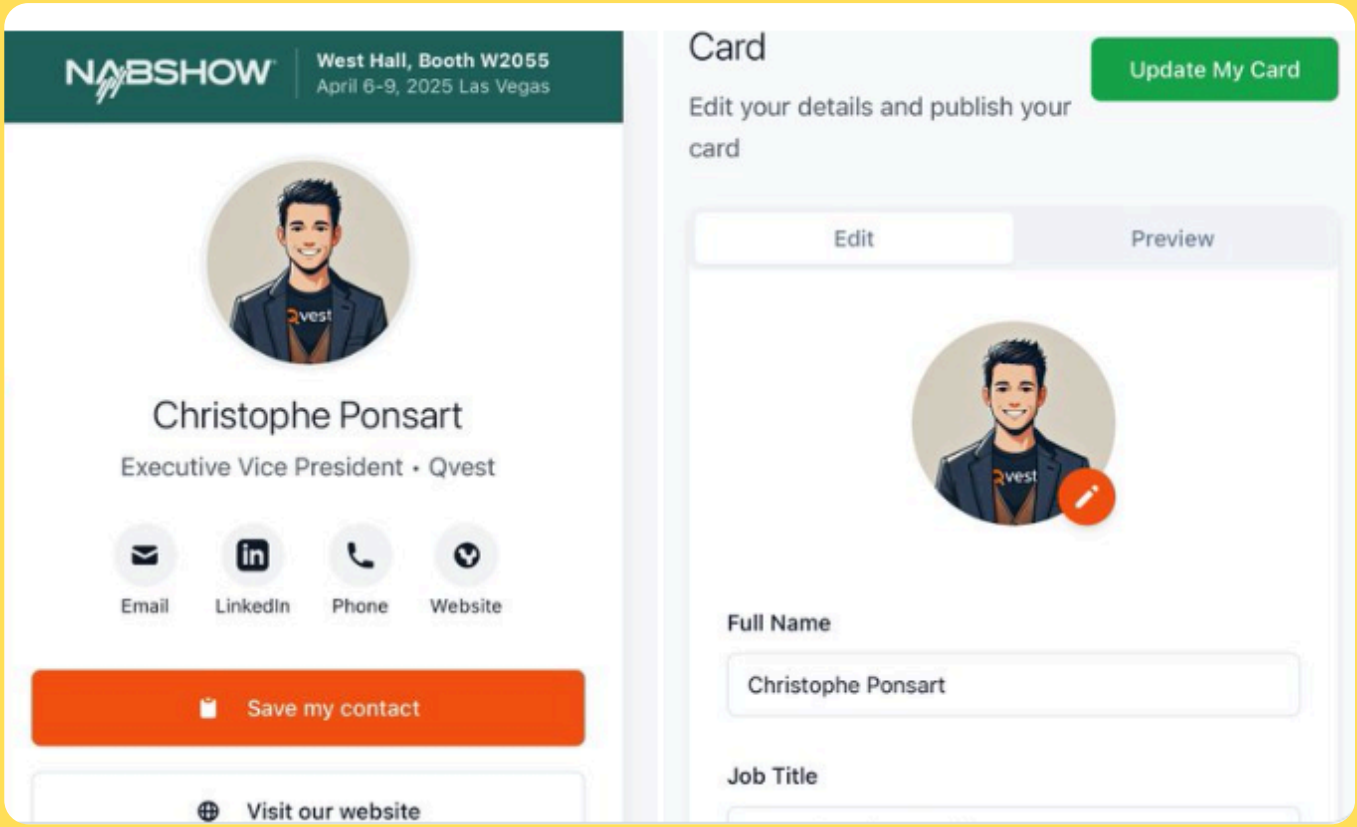
Bakkesh KS just built and launched his first SaaS MVP in a single day using Lovable, all with just 30 credits.

- Fully functional MVP
- Built fast with Lovable's AI-native tooling
- Proof that you don't need a huge budget or team to ship real software

This is the kind of momentum that defines modern building — fast, focused, and fearless.

Big congrats to Bakkesh for showing what's possible with the right tools and a maker's mindset.

Christophe Ponsart built their company’s virtual business card app using Replit

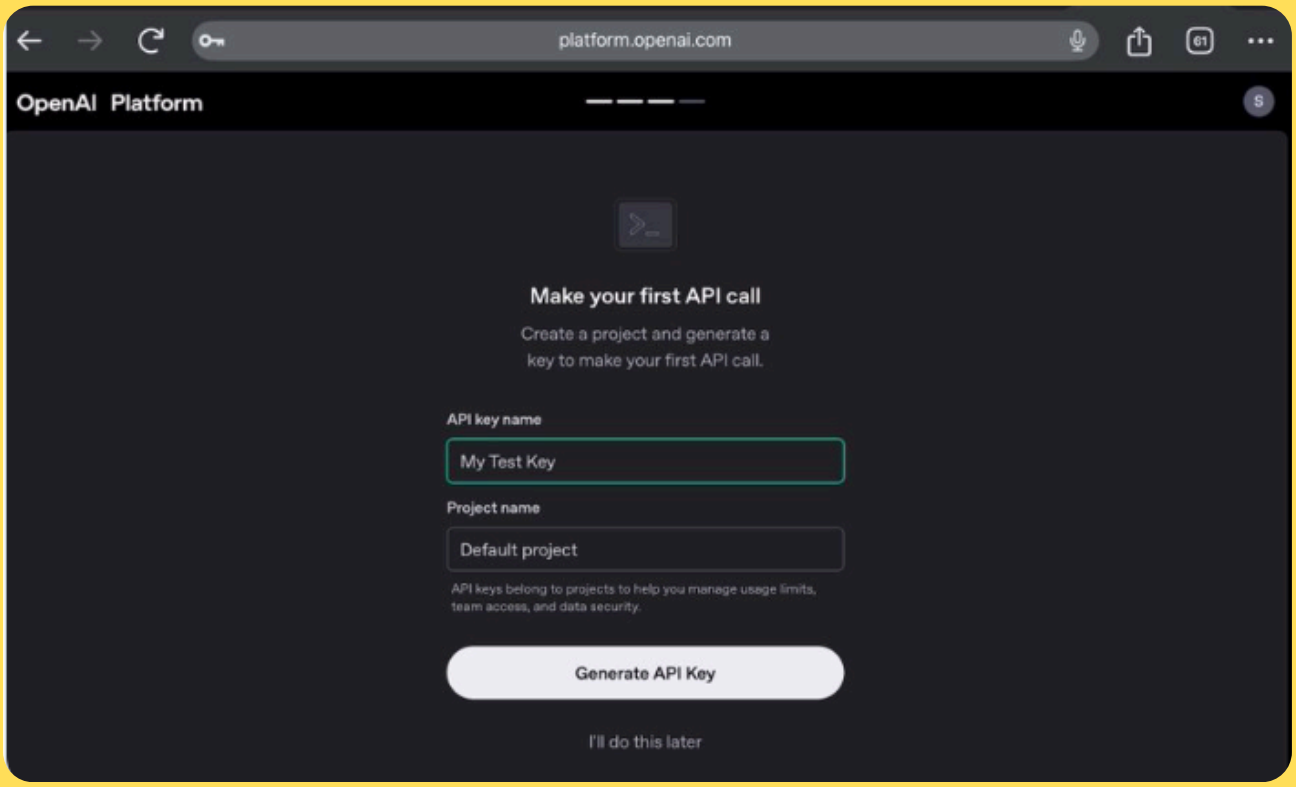


Christophe Ponsart just built a virtual business card app for their company using Replit — making networking smarter, sleeker, and more sustainable.

- Built end-to-end on Replit
- Instantly shareable, always up to date
- A modern take on the traditional business card
- This is a great example of using lightweight tools to create high-impact, real-world solutions — fast.

Well done, Christophe! A simple idea, brilliantly executed.

Suzanna Prophecy Daniel built her first website using Replit + ChatGPT



Suzanna Prophecy Daniel just built her very first website using Replit + ChatGPT — and it's a powerful example of what happens when creativity meets accessible tech.

- Developed in Replit
- Guided and supported by ChatGPT
- From idea to launch — first step into web development!

It's always exciting to see new builders take the leap and ship something real. Huge congrats to Suzanna for starting her journey with confidence and curiosity!

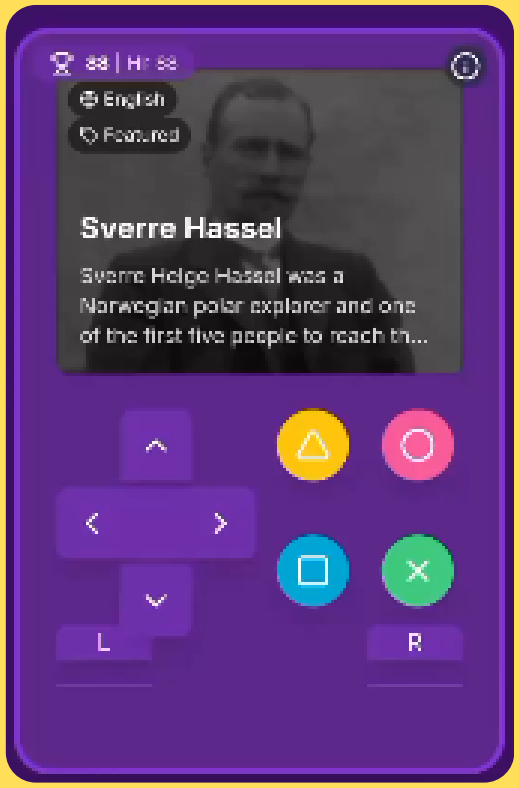
dcts built a space shooter in just 3 hours using Lovable

dcts created a fully playable space shooter game using Lovable — from concept to completion in under 3 hours.

- Fast-paced gameplay
- Built with Lovable's AI-powered tools
- Proof that speed and creativity can coexist

This kind of rapid prototyping shows what's possible when great ideas meet the right tools — and a builder who just goes for it.

Mudasir Fayaz vibe coded WikiXplorer -> GamePad for Wikipedia



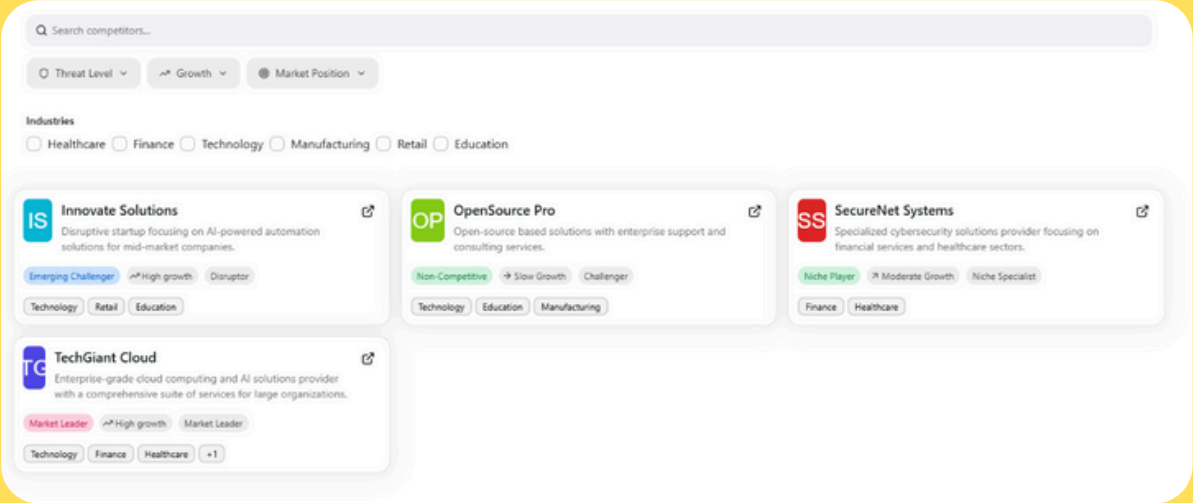
Mudasir Fayaz just vibe-coded WikiXplorer → GamePad — an interactive, gamified experience built on top of Wikipedia.

- Explore knowledge like a quest
- Turn discovery into play
- Built with creativity, curiosity, and just the right tools

This is a brilliant example of reimagining how we interact with information — making learning more immersive and fun.

Big kudos to Mudasir for turning one of the world's largest knowledge platforms into an adventure.

Paul Towers ran a test of bolt.new, v0, Lovable and HeroUI to create the dashboard



Paul Towers recently ran a hands-on test using bolt.new, v0, Lovable, and HeroUI — all to build out a fully functional dashboard.

- Backend with bolt.new
- Frontend with v0 + HeroUI
- Design + flow with Lovable

The result? A clean, responsive dashboard — built fast, with minimal friction and maximum creativity.

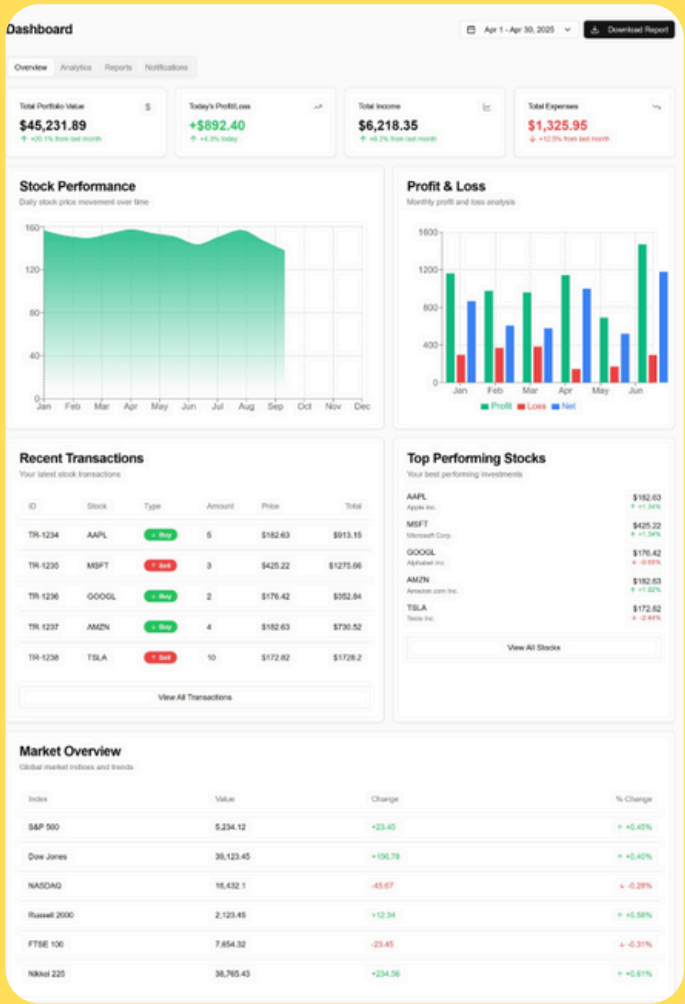
This kind of experimentation is what pushes the boundaries of what solo builders and small teams can ship.

Dharmeesh Rathod built a stock market UI in 10 mins using vercel's v0

Dharmeesh Rathod just built a stock market UI in 10 minutes using Vercel's v0 — and it looks clean.

- Speed-built with v0
- Real-time market visuals
- Proof that great UIs don't have to take weeks

This is what the future of frontend development looks like — fast, expressive, and powered by AI.



Anujeet Shivam built an eCommerce platform which delivers medicine by auto selecting the nearest store from the user's location

Anujeet Shivam just built an innovative eCommerce platform that delivers medicine by auto-selecting the nearest store based on the user’s location.

- Location-based delivery
- Seamless user experience
- Designed to make healthcare more accessible and efficient

By leveraging smart location tech, this platform ensures users get their medicines faster and more conveniently than ever before.

Incredible work, Anujeet, creating solutions that make a real difference!
